

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

MEXICAN MAIOLICA

MEXICAN MAIOLICA

INTRODUCTORY NOTES

THE glazing of earthenware with oxid of tin is now believed to be of Saracenic origin, having first been introduced into Egypt and Persia by the Arabs, who afterward carried the art into Morocco, whence it was taken by the Moors into Spain. Workmen who went from Spain to Italy established the art in the latter country. It next appeared in France, at Nevers and other places, and soon after in Holland and Germany, gradually spreading to almost every section of the Continent and into England.

It was not known to ceramic writers until five or six years ago that tin-enameled pottery had ever been produced in the Western Hemisphere. Isolated examples of maiolica had been brought back by American tourists in Mexico from time to time, but these were supposed to be of Spanish workmanship and were known as Talavera ware. Writers have fre-

[3]

quently described the elaborate, and tile-work of the old churches, con religious foundations of that country thought as to its origin. Recent inv ever, have resulted in the discovery ferous faïence was made in Mexico ters and their native s early century, and continu, produce able scale until the p e. Th the manufacture w and for centuries that city en onopo industry.

Puebla, or La P Ánge the Angels), was f a new iards in 1532. At ing o century its manufac otton, and pottery had l estab famed throughout Old S pottery had been p nativ the time of the Cor glazin duced until potters w at from General A. M. Gottsch ly of recent report to the State l part states: "In the early days of Pue Dominican friars, struck by the apti tec parishioners at making crude na

desirous also of obtaining tiles for the monastery and church which they were building, sent word to the Dominican establishment at Talavera de la Reina, in the province of Toledo, Spain, that they could make good use of five or six of the brotherhood who were acquainted with the Spanish process of pottery-making, if such could be sent to them. Accordingly, a number of Dominican friars, familiar with the clay-working processes in use at Talavera, were assigned to the Puebla house of their order, and under them were trained a generation of workmen who for the first few succeeding years produced some excellent pieces."

By 1653 the maiolica industry of Puebla had grown to such proportions, without restriction of any sort, that it became advisable to organize an association for the mutual protection and assistance of the master potters. Accordingly, a Potters' Guild was established in this year, records of which have been found among the official archives of the city. The laws which were adopted regulated the preparation of clays and glazes, the qualities of the different grades of pottery, the character of the decorations, the sizes of household utensils, and the sale of wares, and required the marking of each piece with the initials or monogram of the maker, penalties being provided

for the counterfeiting or falsification of the trademarks.

The first examiners of the guild (in 1653), before whom every applicant was required to appear to prove his qualifications and eligibility to membership, were Diego Salvador Carreto, Damián Hernández, and Andrés de Haro. [redacted] years later (apparently in 1662) Antonio Marrón [redacted] Santillana, Spain, one Roque of Talavera [redacted] and José Ramos, master potters of Puebla, represented the guild in petitioning the city to turn over to that organization the originals of the laws relating to the trade, and setting forth the rights, privileges, and obligations of the members. These decrees remained in force until 1676 and possibly later. After the latter date, however, the organization appears to have languished, since no subsequent record has been discovered in the books of the corporation of the city, and the provisions for the protection of the craft were apparently no longer enforced.

Several influences were at work in the seventeenth century in developing the art of maiolica-making in Mexico. The earliest pieces which are known to us, produced before 1700, are embellished with strapwork and scrolled patterns in Moresque style. An excellent example of this variety, from the lavatory

of the old convent of San Francisco at Atlixco, is a laver, or basin, some twenty inches in diameter, decorated in dark blue outlined with black, now in the collection of the Pennsylvania Museum in Philadelphia. A similar specimen, owned in Mexico, bears around the margin the explanatory inscription, "Soy para labar los sacryfycadores y no mas" ("I am for washing the sacrificers [hands] and for nothing else"). The most important work of this character, however, is probably the dado in the Chapel of the Rosary, belonging to the Church of Santo Domingo in Puebla (erected in 1690), which consists of tin-enamelled tiles painted with a strapwork design in blue and white, alternating with panels of other tiles embossed with patterns in Moorish taste.

The Spanish influence naturally impressed itself upon the glazed pottery of Mexico at an early date, through the craftsmen who were brought from Talavera and other places in Spain. From about 1600 to 1650 the Spanish style of painting, by which we mean the introduction of birds and animals and figures of saints among the decorative motives, largely preponderated. But about the middle of the seventeenth century the extensive importation of Chinese porcelains into Mexico, through the port of Acapulco, began to stimulate the artistic zeal of the Pueblan potters, who

soon commenced to imitate the Oriental forms and paintings, and rapidly developed a pseudo-Chinese style, which continued until about the middle of the following century.

By the beginning of the nineteenth century the Chinese influence had entirely disappeared, and the later debased polychrome the Talavera maiolica, which was developed in the latter part of the eighteenth century, introduced in Mexico, which marked the beginning of the decadence of the art. New colors were introduced, and the products of the Hispano-Mexican period, which continued from about 1800 to 1860, became gaudy and flamboyant, and over-decoration vulgarized the ware.

Since this art was introduced into Mexico by the priesthood, we may naturally expect to find in the ecclesiastical edifices of that country the best work of the early craftsmen. Here were placed the most intricate designs in tile-work, such as friezes and panels, made to fill special orders; entire façades of churches and convents were covered with tiles in the most elaborately executed patterns; tile-incrusted domes in many colors were often surrounded by glazed statuettes; wall mosaics of great size were painted with scriptural and legendary scenes; extensive lavatories with enormous maiolica basins beautifully decorated

were erected for the use of the clergy; baptismal and holy-water fonts, and services for the tables of the convents and other religious houses, were produced in great abundance.

Having executed the more pressing orders of the priests, the potters were free to supply the needs of the people, and vast quantities of articles were produced for household use, such as bath-tubs or cisterns, covered dishes, bowls, basins, bénitiers, inkstands, sand-sprinklers, salt-cellars, candlesticks, and large jars for storing liquids, vanilla, chocolate, and other foods. Among the objects most frequently met with are tall, cylindrical vessels, of the form of the Spanish and Italian albarelli, which were used to hold drugs, but more frequently served as receptacles for cut flowers, which have always been cultivated in great profusion by the Mexicans, and jardinières and flower-pots in the forms of barrels and urns, for growing plants, which were placed in the gardens or set on the balconies around the four sides of the patios, or inner courts.

The dwellings of the wealthier classes were frequently beautified, both externally and internally, with tile-work of attractive designs and colorings. Panels painted with figures of saints, coats of arms, and inscriptions were set in the walls of apartments

and staircases and over the entrance. In many of the cemeteries tiles were ornamentation of graves and tombs these, painted with figures of saints found in place.

We learn from the records of those preserved in the archives of the city three varieties of pottery were fabricated the common, and the yellow, such as pans, strainers, etc." It was decreed that the manufacture of pottery, either fine or common, without passing the examination required for the pottery he expects to make. He may be of any kind in whose manufacture he is engaged, but by perchance his examination has been completed.

It was also specified that the fine pottery shall be "painted in blue and finished in black with the borders and edges, . . . and, in the same way, may be variety, the other style of this fine ware *shall be in imitation of the Chinese ware*, or figures and designs in colors, making the fine wares the coloring of the Chinese ware, very blue and black, in the same style and with *relief-work in blue* and black.

A critical examination of the collections of Chinese pottery which are accessible to us en-

these wares into four classes, based on their distinctive forms and characteristic decorations, as follows :

- | | | |
|----------------------------------------------|---|------------------|
| 1. The Moresque style | } | Blue monochrome. |
| 2. The Spanish, or Talavera, style | | |
| 3. The Chinese style | | |
| 4. The Hispano-Mexican, or
Pueblan, style | } | Polychrome. |

These varieties may be roughly separated into two groups, the first being composed of those examples which were produced previous to 1800, which were decorated in blue; the second consisting of those pieces which were made during the nineteenth century, which were painted in various colors. The blue color was thickly applied and stands out in perceptible relief, a peculiarity which enables the collector to distinguish the Mexican maiolica from the Spanish, which latter was always painted with thin, flat pigments.

In the Hispanized, or Talavera, style, of the second class, the Italian influence can occasionally be traced. It is known that maiolists went from Italy to Spain in the seventeenth century, and it is not surprising that the pottery of Talavera and other maiolica centers of the latter country should present certain resemblances to the productions of Savona and Genoa.

The characteristics of the early Talavera wares of Spain are the absence of metallic lusters, which were so prominent a feature in the products of Malaga and Valencia, and the prevalence of blue color in the white enamel of the ground. Animal, bird, and human forms were introduced, in combination with foliated and floriated ornament, frequently crowded together without regard to proportion or fitness. In the earlier Mexican maiolica of the Talavera period these peculiarities are strongly marked. The influence of the Malaga or Valencia does not appear to have penetrated into Mexico, for no lustered pieces have yet been found among the fabrications of Puebla.

Although these styles of execution, which received their inspiration from widely divergent sources, were well marked, they were frequently combined in the same piece. While, on the one hand, we find examples where form and design are consistently Spanish, on the other, in spirit, on the other, we meet with objects whose shape with ornamentation in Moorish, or, occasionally, Aztec taste, the latter having been introduced by Indian apprentices. Large bowls and deep jars of Spanish form are frequently decorated in the Mexican manner. It is owing to these almost limitless variations and combinations of modeling and decora-

tive treatment that the study of Mexican maiolica possesses such absorbing interest and presents so many surprises to the ceramic student.

The Talavera style of Mexican pottery is of at least two distinct varieties. The earliest is that to which we have applied the term *tattooed*, in which the ground is thickly set with rudely painted dots and dashes in dark blue, interspersed with small animal motives surrounding the principal decorative designs, a style which flourished between about 1660 and 1700. A peculiarity of this treatment is the depressed appearance of the tattooed ornamentation, the color having sunk into the surface of the white enamel.

Next in chronological order is the characteristic decoration, found principally on albarelli and spherical jars, in which birds, flowers, and conventional devices are boldly, but rudely, painted in silhouette, in solid, raised dark blue, a method of treatment which was in vogue from about 1700 to 1750.

Of the third class, painted in blue monochrome or camaieu, in Chinese taste, four different styles may be distinguished. The first of these is characterized by solid dark-blue grounds, thickly applied, surrounding figure designs reserved in the white surface. The second variety, treated in the opposite manner, is embellished with Chinese figure subjects painted on

the white surface. The third style shows European figure motives, usually combined with Oriental details, while the fourth consists of alternate white and blue medallions of irregular form, ornamented with floral and conventional patterns, painted on the white field, and reserved in the blue.

The rules for the government of the members of the Potters' Guild, which flourished in Puebla in the seventeenth century, throw much light on the composition of the early ware. The glaze for fine pottery contained four or five one-sixth parts of lead to one of tin, a somewhat smaller proportion of the latter ingredient than is employed by the modern Pueblan potters. In consequence of the greater care exercised in the preparation of the materials, however, the glaze of the older ware was more even and homogeneous than that of the modern-day maiolica. For the common wares the glaze consisted of twelve and a half parts of lead to one of tin. Since the lead was incorporated with the clay before the composition was applied to the ware, the enamel is homogeneous and so hard that it can only with difficulty be scratched with a steel point.

A careful study of the body of Puebla maiolica reveals the fact that the clays employed were apparently of two kinds, white and red. These two

varieties will be found to occur in the earliest pieces as well as those of recent date. The white body is much softer than the red, the difference in color being caused by the degree of heat to which the ware was subjected at the first firing, or the length of time it was allowed to remain in the kiln. When baked slightly the clay appears white and porous, and so soft that it can be readily cut with a knife; but when allowed to remain longer in the kiln, at a high temperature, it becomes partially vitrified and considerably harder, and of a deep pink or reddish hue, increasing in density with the darkening of the color. Thus the tint of the body bears no relation to the antiquity of the ware, nor does it indicate the locality from which the clay was obtained.¹ It is true that two varieties of clay are used—white clay obtained at San Bartolo, San Pedro, and Santo Tomas, hills near the village of Totomehuacán, five kilometers from Puebla, and red clay from Loreto and Guadalupe, in the vicinity of Puebla; but these are always combined in equal parts to produce the results de-

¹ It is a curious fact, however, that many of the best pieces of the earlier ware were only slightly fired and, as a result, possess a light-colored body, which in some instances is almost as soft as chalk, but is always covered with a hard enamel. The larger and coarser pieces were usually burned more thoroughly and are consequently more vitreous and of a darker tint beneath the glaze.

sired. It is stated that no other combination of clays is employed and that neither the red nor the white clay can be used alone with satisfactory results.

Since it is to be presumed that the law requiring the marking of pottery during the existence of the Potters' Guild in Puebla, from 1653 to 1676, was strictly observed, we expect to find pieces of that period bearing registered devices of their makers. While examples of this character are comparatively rare at the late date, numerous marked pieces have been found. Among these private marks we find the letter F, usually on tiles painted with human figures and animals in Chinese taste. The representation of a bee also frequently figures among the decorations on tiles from the same fabrique, evidently the private device, probably standing for the initial of the name, of a potter or decorator. The letters "he" are painted in blue on the sides of ornate jars. Enormous bowls, or basins, sometimes bear the letters C. S. A large laver, showing Moorish influence, is marked with a cursive A. Among the other devices which have come to light are a character resembling a florid y, the monograms and initials To, O R (the O above the R), M A, the monograms SCo and CAo (the o over the A) in black, the letter Z in blue, and a brown V with

the figures 6 and 8 at the ends of the arms. Some of the more important pieces bear simple and complex crosses scratched in the paste or traced in blue and extending almost entirely across the bases. All of the dark-blue marks occur on pieces belonging to the latter half of the seventeenth century. Those in black and brown are found on vessels belonging to the first half of the nineteenth century, when the marking of pottery appears to have been revived. In the absence of a complete list of members of the original guild, or a directory of the potters of the early nineteenth century, the exact significance of these marks has not yet been determined.

Without sufficient authentic records we can only fall back upon tradition to throw light on the extent of the pottery industry in Mexico during the seventeenth and eighteenth centuries. The great numbers of early pieces which have survived would indicate the existence of numerous establishments at different periods. Toward the middle of the seventeenth century, according to the statements of some of the older potters, whose ancestors for several generations produced maiolica in Puebla, there were at least ten or twelve manufacturers in that city. About 1750, when the industry had reached its height, some thirty potteries were in operation. Bancroft, in his

"History of Mexico," informs us that there were fifty-six establishments for the manufacture of pottery, but that the number had decreased to eighteen at the beginning of the nineteenth century. Toward the middle of the century the number decreased to about twelve. At the present time only six *locerías* are active, and the coarse utilitarian wares and tiles, formerly of great merit, are being produced in small quantities. The few pieces, however, that are being produced are encouraged some of the most skillful manufacture of old designs, and most of the best specimens are frequently met with in the collections of the National Museum of Mexico.

In 1900, Señor L. Verónica, who came from Barcelona, Spain, began his art education in Paris, and has since adopted a modern standard of pottery by re-creating the old designs. His work is characterized by a conscientious adherence to the spirit of the old. He has made a thorough study of the pottery of Mexico, and his knowledge of the wares has enabled him to combine in his work the Mexican and Spanish methods, in which are found in both, to originate new designs while based on the traditions of the

so distinctive in treatment that it can be recognized without difficulty.

It is only within the past few years that the Mexicans themselves have commenced to recognize the true character of the tin-enamelled pottery which is found in their country. Collectors in various parts of the republic have, as the result of recent discoveries, turned their attention to the gathering together and preservation of these remains of one of the earliest of Hispano-Mexican arts. Of these local collections, that formed by Mr. Albert Pepper, an architect, of the City of Mexico, has been recognized for many years as one of the most important. In the Pennsylvania Museum, Philadelphia, may be seen a representative group of these early wares. The interest in this subject, however, has not been confined to America, for we learn that European collectors have lately been attracted to this field of research, and groups of Mexican maiolica have already been sent to Germany, France, and England.

Mrs. Robert W. de Forest, who for many years has been engaged in collecting the folk pottery of all peoples, during a trip to Mexico in 1904 became interested in the pottery of Puebla, and at that time gathered together the nucleus of her present collection. Through the assistance of Mrs. Zelia Nuttall

of Coyoacán, she has been able to a time, many rare and valuable ex recent acquisition of the well-known Albert Pepper has made her colle most extensive and representative c particularly rich in polychrome pie about 1800 to 1860, of which Nos. 7 116 are especially noteworthy. A pieces, in dark blue, special attention 4, 63, and 64.

The maiolica of Mexico, crude an frequently appears, possesses an el vigor, in the boldness of its modelin treatment, which gives it an individu The reflection of the virile art of with the refining influence of Orient sulted in the development of a co pottery, which at its best period, be 1750, was quite distinct from the w any other country.

CATALOGUE OF MEXICAN MAIOLICA

I

SHOWING SPANISH INFLUENCE

(a) TATTOOED STYLE

1650-1700

- 1 Jar with fern leaf, bird, and animal decoration in dark blue. Reserved white label for name. About 1660-1680. Height 11 inches.
- 2 Pair of jars. Fern leaf, floral, and bird decoration in dark blue. Marked "h e". Reserved white label for name. About 1660-1680. Height 10 $\frac{5}{8}$ inches.
- 3 Jar with six (6) serpentine handles, fern leaf and bird decoration in dark blue. About 1660-1680. Height 9 $\frac{3}{4}$ inches.
- 4 Laver. Central figure of a woman surrounded by fern leaf and bird designs in dark blue.

Marked "h e". About 1660-1680. Diameter
20 $\frac{1}{4}$ inches. PLATE I.

- 5 Plate. Decorated with the figure of a man carrying a banner, in dark blue. About 1670. Marked "Z". Diameter 8 $\frac{5}{8}$ inches. PLATE II.

- 6 Lid of jar. Fern and animal decorations (hares and fishes) in dark blue. About 1680. Diameter 10 $\frac{7}{8}$ inches.

- 7 Large plate or platter. Fern leaf, bird, animal, and flower decorations in dark blue. About 1680. Diameter 14 inches.

(b) SILHOUETTE OF OTHER STYLES,
IN DARK BLUE
ON WHITE

- 8 Chocolate jar. Conventional animal and bird decoration. Iron collar; lock missing. About 1700. Height 10 inches. PLATE III.

- 9 Pair of jars. Conventional animal and bird decoration. About 1700. Height 10 $\frac{1}{4}$ inches. PLATE IV.

- 10 Large jar. Conventional bird and floral decoration in dark blue. About 1700. Height 12 inches.

is Spanish, but the decoration reveals Oriental influence. About 1700-1750. Height 17 inches.

PLATE XXI.

- 71 Barrel-shaped jardinière. Paintings of men in Spanish and Chinese costumes, in reserved white medallions, alternating with irregular blue medallions containing reserved white decorations. The figures in the four medallions represent a Chinaman carrying a jar, a man looking through a telescope, a Spaniard playing a guitar, and a man in Chinese garb with arms outstretched. The decorations show Chinese influence. About 1700-1750. Height 18 inches. PLATE XXII.

III

SHOWING HISPANO-MEXICAN INFLUENCE

1800-1900

- 72 Water jar with two handles. Decorated in polychrome—green, blue, yellow, brown, and rose. Around the center are painted figure scenes from Indian life. An Indian carrying two water vessels is approaching a well. A Mexican is shown carrying two jugs, while beside him a boy is ascending a ladder leading to an upper window

of a house. On the other side two water carriers are fighting, while in front is the representation of a well. Between the figures are trees and vines with convolvulus blossom. Height $17\frac{7}{8}$ inches.

The rose or mauve color was not introduced into Mexican maiolica until the beginning of the nineteenth century. This interesting piece is about that period. PLATES XXIII AND XXIV

- 3 Water jar with handles, a companion to the preceding. Similar colors have been used in decoration, but the figure scenes are somewhat different. At the front is a similar design of a well, by the side of which a woman stands. On the other side another woman is shown grinding corn on a metate, while a third woman is carrying water on a yoke and leading a boy who is filling a jug at a well. The same house with a ladder is shown, the door of the upper window being closed. The ladder is held by a man who stands at the base of the ladder, with a key in one hand and a staff in the other. Approaching from the left is a man bearing water vessels. About 1820. Height $17\frac{7}{8}$ inches. PLATES XXIV AND XXV

- 4 Covered bowl. Decoration in green, brown, and rose. Inscription, "Viva Fernando 7". About 1820. Diameter 9 inches.

The ornamentation consists of roses painted in a peculiar mauve tone, and was evidently introduced during the reign of Ferdinand VII of Spain.

- 144 Plate. Polychrome decoration. Figure of woman in the center. Nineteenth century. Diameter 7 inches. PLATE XXXVI.
- 145 Laver or bowl. Polychrome floral decoration. About 1850. Diameter $19\frac{1}{2}$ inches. PLATE L.
- 146 Oblong dish or platter with waving edge. Decorated in polychrome with figure scene. About middle of the nineteenth century. Length $11\frac{3}{4}$ inches. PLATE XXXVI.

MODERN PIECES LATE NINETEENTH CENTURY

- 147 Baptismal basin. Decorated in polychrome with subject, "The Baptism of the Saviour". Diameter $16\frac{3}{4}$ inches.
- 148 Large fluted bowl. Polychrome decoration. Diameter $13\frac{3}{4}$ inches.
- 149 Bowl with polychrome decoration. Diameter $8\frac{3}{4}$ inches.
- 150 Bowl. Polychrome decoration. Diameter $8\frac{3}{4}$ inches.
- 151 Cylindrical jar with two handles. Polychrome decoration. Height 13 inches.

145

PLATE L.

- 152 Cover of jar. Polychrome decoration. Diameter $12\frac{1}{4}$ inches.
- 153 Plate. Dark blue design. Diameter $9\frac{1}{2}$ inches.
- 154 Dish. Conventional polychrome designs. Diameter 9 inches.
- 155, 156 Large inkstand of star form with stopper. Decorated in blue monochrome with human figures, birds, and animals. Diameter $7\frac{1}{4}$ inches.
- 157 Tile lavatory, containing three lavers, or basins, decorated in polychrome, with vases of flowers and escutcheon of the Franciscan monks. About 1830.

LEAD-GLAZED POTTERY

Sgraffito, or slip-decorated, pottery was produced at Guanajuato, Mexico, in the first part of the nineteenth century.

- 158 Oval shaving-dish of red clay, covered with white slip with incised floral ornaments in red and green. Guanajuato, about 1830. PLATE LI.
- 159 Large dish or plate of red clay, covered with incised ornaments representing a vase of flowers

and birds in green and brown. Gu about 1830.

- 160 Figure of a deer in sitting attitude. The lines in the head indicate that antlers, made of wood, were intended to be inserted. This example found in Mexico was probably from China and is not of Mexican work. Large quantities of Chinese pottery and porcelain were imported into Mexico in the seventeenth, and nineteenth centuries.

SPANISH MAIOLICA

The following described pieces, found in Mexico, are of Spanish origin.

- 161 Albarello or drug jar. Decorated with a crowned, double-headed Austrian eagle. Talavera, Spain. About the middle of the eighteenth century. Height 8 inches.
- 162 Large plate. Decorated with floral and arabesque signs in blue. Talavera, Spain. Early nineteenth century.
- 163 Large plate with heraldic design in blue. Talavera, Spain. Late eighteenth century.

158

159

PLATE LI.

PLATE LII.

- 164 Large plate with blue heraldic design. Talavera, Spain. Early nineteenth century.
- 165 Oblong dish or platter. Polychrome decoration. Inscribed "D. Favsto Agvada". Length 10½ inches.
- 166 Cup. Blue decoration. Probably Talavera, Spain. Late eighteenth century. PLATE XXXIII.
- 167 Cup. Polychrome decoration. Talavera, Spain. Late eighteenth century.
- 168 Cup. Blue decoration. Talavera, Spain. Early nineteenth century.
- 169 Tazza. Conventional bird and floral decoration in dark blue. Talavera, Spain. About 1775-1800. Diameter 10 inches. PLATE XXXVII.
